

Wabi-kusa with Waterfall

With Wabi-kusas placed on the Waterfall, aquatic plants grow densely with time, and you can hear the sound of water through the plants. Fishes swim in the bottom layer which is a water space filled with water. The view of the Waterfall system is almost like a jungle.

Aquatic plants can be grown easily by placing Wabi-kusa on the Waterfall which has a staircase like structure as the water circulate continuously through Waterfall and avoids plants from drying out. It gives the joy of seeing both under-water and overland sceneries.
